

## Sitecore SXA module: SmartFill

### Module Sitecore Hackathon Category:

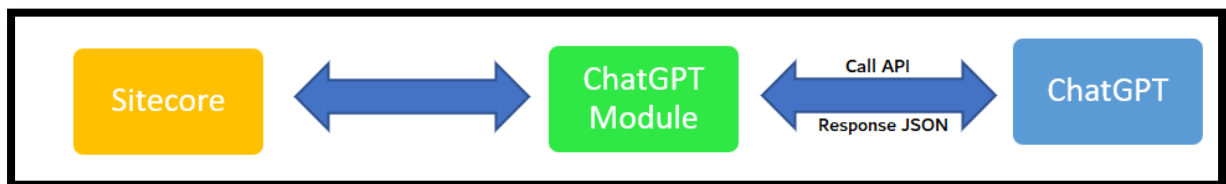

Best enhancement to SXA Headless

### Module Purpose:

Filling the descriptions of Rich Text fields can be a cumbersome task for Content Authors. However, with our customized solution featuring Rich Text fields, Content Authors can now automatically fill in the relevant content based on the item name, thus simplifying the process using ChatGPT.

### Approach:

1. We are using ChatGPT APIs for getting response for a posted question as.

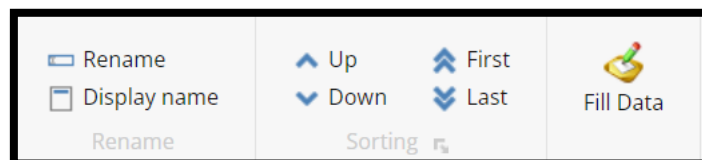

### Installation Instructions:

1. Download and install our Sitecore package
2. Open ChatGPT.config file and update your ChatGPT key

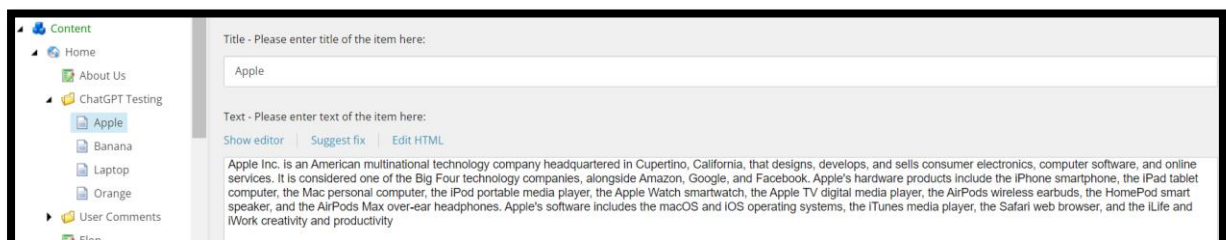

```
<setting name="ChatGPTAPIKey" value="" />
```

### How does the end user use the Module?

1. Login to Sitecore.
2. Click on Content Editors.
3. Select any item that have rich text field.
4. Click on menu item "Fill Data" under Home menu.

5. Content will be populated by system as per the item name.

6. This tool will save time and efforts of Content Authors, admin, developers etc.

### Future Improvements:

Add Property button "Fill Data" for rich text fields.
